Will Baker CV

About Me

I'm a graphic designer and front-end developer studying at Loughborough University. My work focuses on thoughtful, user-led design, whether that means creating visual identities, building accessible websites, or developing bold campaigns that connect with people.

I've explored everything from rebranding city landmarks and crafting modular typefaces to designing packaging for fictional brands and running inclusive design research based on personal experience. I care about clarity, consistency and finding the right tone for the right audience.

Skills

- Highly skilled in the Adobe Suite including Photoshop, Illustrator, InDesign and After Effects
- Proficient in Figma, Glyphs (font development software) and Blender
- Creation of cohesive brand systems across digital and physical media, including logos, signage, campaigns, and packaging.
- Focused on accessibility and user-centered design; proficient in wireframing, prototyping, and responsive layout creation.
- Experience with creating websites and web apps with a variety of technologies (React, Astro, SQL, Wordpress)

Education

Loughborough Students Union NOV 2024 - Current

Technical Team Leader

- Managing and training a team of 20 members, liaising with other department managers to advise technical details for external events.
- Created custom and bespoke club visuals in cooperation with the Marketing department.
- Setup of audio visual equipment including radio mics, speakers as well as lighting systems.
- Set up the venue for both internal university events and external corporate events.
- Created dynamic, immersive and creative lighting effects for sold out club nights.
- Monitoring, maintenance and repair of equipment to ensure smooth operations.

Greenleaf Tutoring NOV 2022 - MAR 2023

Technical & Design Consultant

- Responsible for designing and building a website, creating comprehensive in-house documentation that streamlined onboarding for 15 new employees, designing and creating APIs and databases, and planning infrastructure for scalability without performance degradation.
- Utilized my expertise in web development, API design, and database management to complete projects faster than projected timelines, resolve technical issues promptly, and contribute to a major product launch that significantly boosted company revenue.
